

# **Critical Factors in the Adoption and Diffusion of E-government Initiatives in Oman**

Hafedh AlShihi

This thesis is submitted in fulfilment of the  
requirements for the degree of  
Doctor of Philosophy

School of Information Systems

Faculty of Business and Law

Victoria University

March 2006

---

*For My Parents, My Wife & Son*

---

## Declaration

“I, Hafedh AlShihi, declare that the PhD thesis entitled *Critical Factors in the Adoption and Diffusion of E-government Initiatives in Oman* is no more than 100,000 words length, exclusive of tables, figures, appendices, references and footnotes. This thesis contains no material that has been submitted previously, in whole or in part, for the award of any other degree or diploma. Except where otherwise indicated, this thesis is my own work”.

# Acknowledgments

After sincerely thanking Allah for all blessings and bounties, I would like to thank many people for their contribution, assistance, support and guidance.

First of all, I would like to thank my parents for their daily prayers and enormous efforts to make me who I am. Foremost I would like to thank my wife and son who accompanied me along the joyful journey of knowledge, and who marvellously created the right atmosphere for me to bring this research to fruition. I am also grateful to my home country (Oman) that continuously offers its people free education from first grade, and to my employer (Sultan Qaboos University) for sponsoring my postgraduate education (Masters and PhD).

Special thanks to my supervisors for their continued encouragement, support and valuable advice: first, my principal supervisor Professor Michael McGrath, who showed me the way and taught me everything I need to become an accomplished researcher; and Associate Professor Arthur Tatnall, who acted as my principal supervisor for a semester and guided me on how to go about making my research public. I would also like to express my deep gratitude to Dr Stephen Burgess for being there whenever university or administrative matters have arisen. To all other staff of Victoria University in general and the School of Information Systems in particular who work behind the scenes to ensure research students get all academic resources and help they need, I say thank you and God bless you all.

Finally, I truly appreciate and wish to acknowledge the professional editing assistance of Ms Sam Oliphant from The Second Office, and Ms Michele Waddington from m2w2.

# Abstract

Many significant barriers must be faced in the adoption and dissemination of e-government systems regardless of how advanced or modest a country is in terms of ICT infrastructure and deployment. This research has endeavored to investigate the impediments associated with the development and diffusion of e-government with a concentration on non-technical and country-specific factors. The focus of the research was on Oman's efforts to develop an e-government system, using advanced nations' experiences in the same domain to establish benchmarks.

Initially, this research undertook a general literature review to define the barriers to the uptake of e-government and to set and refine aims, scope and questions asked of the research. Subsequently, a more focused literature review was conducted on the experiences of advanced nation with e-government, to identify possible lessons for and solutions to barriers facing the take-up of e-government. In parallel, an exploratory case study of the Oman e-government project was conducted that aimed to test the extent to which the barriers and solutions drawn from the largely Western-centric literature apply in the Omani situation, and to investigate other possible cultural and country-specific barriers. Semi-structured interviews and face-to-face administered questionnaires were the primary data collection strategies used throughout the case study phase.

The study found that non-technical barriers in Oman, such as users' lack of IT knowledge and the absence of marketing campaigns, have negatively affected people's decisions to use the technology and inhibited decision makers from implementing or adopting technology initiatives. In addition, several country-specific limits to e-government growth were identified. Government decision makers in Oman were found to be prone to short-term planning, which prevents them from anticipating the long-term potential of e-government. Additionally, frequent structural changes within ministries, and the fact that the e-government project is not given high priority nor urgently needed at present, have contributed in delaying development of and improvements to such a system. Ultimately, this research delivered a socio-technical framework for adoption, detailing causes and effects of the critical factors in the adoption and diffusion of e-government initiatives in Oman.
